Career Objective

Full-Stack Developer specializing in Backend ASP.NET Core and Frontend Angular development. Seeking a full-time position where I can design and develop scalable, maintainable web applications and deliver impactful end-to-end solutions, applying hands-on experience with RESTful APIs, JWT authentication, and PostgreSQL.

Education

Bachelor of Science (B.Sc.), Computer Science, February 2026 | Jordan University of Science and Technology.

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Operating Systems, Software Engineering.

Technical Skills

- **Programming Languages:** C#, JavaScript, TypeScript, HTML, CSS
- **Frameworks & Technologies:** ASP.NET Web API, ASP.NET MVC, Angular, RESTful API, Bootstrap
- **Databases:** Microsoft SQL Server, PostgreSQL, MySQL
- **Core Concepts:** JWT Authentication, Role-Based Authorization
- **Version Control:** Git, GitHub, Azure DevOps, Docker
- **Agile Methodologies:** Scrum, Kanban

Work Experience

Software Engineering Intern | Advanced Tech | Jul 2025 – Sep 2025

- Worked within an Agile software engineering team, collaborating on shared codebases and following team-based development workflows
- Used Git, GitHub, and Azure DevOps for version control and team collaboration, including branching, pull requests, merge-conflict resolution, and work-item tracking
- Gained hands-on exposure to the full software development lifecycle, from requirements analysis to implementation and testing

Projects

Large Animal Veterinary Clinic – Web Management System | ASP.NET Web API · Angular · SQL Server | [GitHub Link](#)

Technologies Used: ASP.NET Web API, Angular, Microsoft SQL Server.

- Architected and delivered a full-stack veterinary clinic management platform using **ASP.NET Web API** and **Angular**, supporting 4 distinct user roles and 5 core operational modules from appointment scheduling to inventory tracking
- Implemented **JWT auth** and role-based authorization across 4 user roles in **ASP.NET Core**, enforcing data access control
- Designed and implemented 5 core modules — appointment scheduling, animal registration, medical records, prescription handling, and inventory management — with a normalized **SQL Server** schema and RESTful API endpoints for each domain
- Built responsive, role-aware **Angular** UI with component-level access guards and real-time data refresh, reducing manual coordination steps for clinic staff

Wasel – Delivery Management System | ASP.NET Core Web API · Angular · PostgreSQL · SignalR · Google Maps API | [GitHub Link]

Technologies Used: ASP.NET Core Web API, Angular 18, PostgreSQL, SignalR, JWT Authentication, Google Maps JavaScript API, Cloudinary.

- Developed a full-stack B2B delivery management platform connecting business clients with a delivery team, supporting 4 distinct user roles (Admin, Warehouse Manager, Captain, Client) across pickup and delivery operations
- Implemented a Nearest Neighbor route optimization algorithm with Haversine Formula to automatically sort delivery orders by proximity, reducing captain travel distance
- Built real-time order tracking using SignalR, enabling clients to monitor delivery status updates instantly without page refresh
- Integrated Google Maps JavaScript API with interactive pin-drop for pickup and delivery location selection, reverse geocoding, and Places Autocomplete
- Engineered a two-phase delivery workflow (Pickup shifts and Delivery shifts) with photo confirmation via Cloudinary, ensuring accountability at every step
- Designed a manager dashboard with order filtering by status, client, and date range, shift creation with captain assignment, and captain management capabilities

Blood Donation Platform | ASP.NET Web API · Angular · PostgreSQL | [GitHub Link](#)

Technologies Used: ASP.NET Web API, Angular 17, PostgreSQL, JWT Authentication.

- Developed and delivered a full-stack blood donation platform connecting donors with hospitals, supporting 3 distinct user roles (Admin, Hospital, Donor) across 3 core operational modules
- Implemented stateless JWT-based authentication with three-tier role authorization (Admin, Hospital, Donor), enforcing endpoint-level access control

- Engineered a real-time blood request matching system that automatically notifies eligible donors based on blood type compatibility, with a full donation confirmation workflow
- Crafted a responsive, role-aware Angular UI with standalone components

AI-Powered News Aggregator – Daily Plus | ASP.NET Core Web API · Angular · PostgreSQL · Claude API | [GitHub Link](#)

Technologies Used: ASP.NET Core Web API, Angular, PostgreSQL, Anthropic Claude API.

- Built a full-stack news aggregation platform that fetches articles from multiple sources and uses the Anthropic Claude API to generate concise AI summaries, improving content scan-ability for readers
- Integrated a Large Language Model (LLM) into the .NET backend via REST, handling prompt construction, API authentication, and response parsing with proper error handling and rate-limit management
- Designed RESTful endpoints and a normalized PostgreSQL schema to store articles, summaries, and source metadata
- Developed a responsive Angular interface for browsing aggregated news with real-time summary rendering

Certifications

Full Stack Web Development (ASP.NET & Angular) | PSUT University – Oct 2025 | [Certificate Link](#)

Languages

Arabic (Native), English (Very good)
